

NEW SOURCE OF GREEN ENERGY

INTRODUCTION

Mr. Benjamin Franklin is given the credit for discovering electricity in the year 1752 .Franklin conducted an experiment using a kite on a rainy day. He wanted to demonstrate the relation between lighting and electricity.

What is Electricity?

The definition of electricity is the flow of charge. Usually our charges will be carried by free-flowing electrons. Negatively-charged electrons are loosely held to atoms of conductive materials. With a little push we can free electrons from atoms and get them to flow in a generally uniform direction.

How many types of Green Energy remain in the world?

Green Energy is any type of energy that is generated from natural resources, such as sunlight, wind or water etc. There should not any carbon emission for making green energy.

1. Solar projects
2. Wind projects
3. Tidal Energy
4. Hydro Electric Power projects
5. Biomass Energy
6. Hydrogen as fuel
7. Geothermal projects

What is my INNOVATION?

The basic principle of my project is similar with compressed air to energy.

But it is similar to compressed air in the energy system. Compressed air to energy which is known as energy storage in the form of compressed air.

8. GENGMP (Green Energy from Natural Gas Mining Pressure) NEWLY INNOVATED.

THIS CALCULATION IS SHOWN AS AN EXAMPLE

Figure 2. Natural Gas Flow, Electricity Production Usmg an Expansion Turbine

The 2 MW turbine generated roughly 11,000 MWh of electricity in 1994, while the strip mill delivered a maximum of 12,500 MWh of waste heat to the gas flow (de Jong, 2001). Thus; roughly 88% of the maximum heat input to the high-pressure gas emerged as electricity. The cost of the installation was \$2.6

million, and the operation and maintenance costs total \$110,000 per year. Unlike the EBA case, there is no gas cost, as the strip mill's waste heat is provided at no charge. With total costs of \$110,000 per year and income of \$710,000 per year from electricity generation (at the 1994 Dutch electricity cost of 6.5 cents per kWh), the payback period for the project is 4.4 years (de Jong, 2001)

Acknowledgements

This work was supported by the Climate Protection Division, Office of Air and Radiation, U.S. Environmental Protection Agency through the U.S. Department of Energy under Contract No. DE-AC03-76SF00098. We are thankful to many people who have been very helpful in the data collection and review of earlier versions of this report. We would like to especially thank Ruud van Ginkel and Ton de Jong from Corus IJmuiden (The Netherlands) Josef Pozivil of Cryostar (France), Toyoshi Matsumoto of Osaka Gas Company, Ltd. (Japan), and David Fridley and Jonathan Sinton from Lawrence Berkeley National Laboratory,

My resource (innovated) of Green Energy is also 100 % natural. Why I am telling 100% natural because in my project no need of any

battery, any fuel, it is like hydroelectric plant. Once it will start, it will run at least ten to fifteen years.

My project complies with international research. You may ask me why they (those Scientists) Did not do it in time? There was a small drawback. Which I overcame. I will disclose it when someone contact with me for this project.

We can generate 1-2 MW Green Energy from one natural gas mining well easily.

If some green energy company wants to know more, please contact me.

Tesla Air Generator

Energy Exhibition in Dhaka, Bangladesh 2021

Mr. Farid Ali (David) , CEO and innovator of this new source presented his findings with authentic documents. He also displayed some power point presentation and some videos. He told that using this excess pressure of natural gas mining field, we can able to generate 100% Green Energy. There is no other cost .This plant will run 24 hours. It may be 2-6 M W , depending upon pressure of wellhead. No need of any battery. It is currently applicable for Bhola project. He named this new source as "GREEN BANGLA ENERGY " This project is also applicable for any countries of the world like, India, China, USSR, USA, Canada, Australia, hilippines etc. At present we need more and more green energy. If concern epartment and concern people come forward, we can do it in our country.
